Dear Customer,
Some music labels have recently introduced the DualDisc for pre-recorded audio and video content. The DualDisc bonds DVD content on one side 'back-to-back' with digital audio content on the other side. However, the digital audio side does not meet the technical specifications specified in the Compact Disc Digital Audio standard. For this reason, DualDisc is not permitted to carry the CD logo. Philips DVD and CD players and disc drives fully comply with the CD specifications and therefore may not recognize the DualDisc. Attempting to use DualDisc may lead to playback problems or jamming in the slot loader or drive. The DVD video content on the DVD side of the DualDisc should play on Philips DVD players and DVD drives. However, Philips DVD players and drives do not support DVD Audio, and will not play any DVD Audio content present on the DVD side of a DualDisc. Philips will further investigate DualDisc and update this notice accordingly.
